

Mini BEVs · effect of reconstructing the ADAC cycle

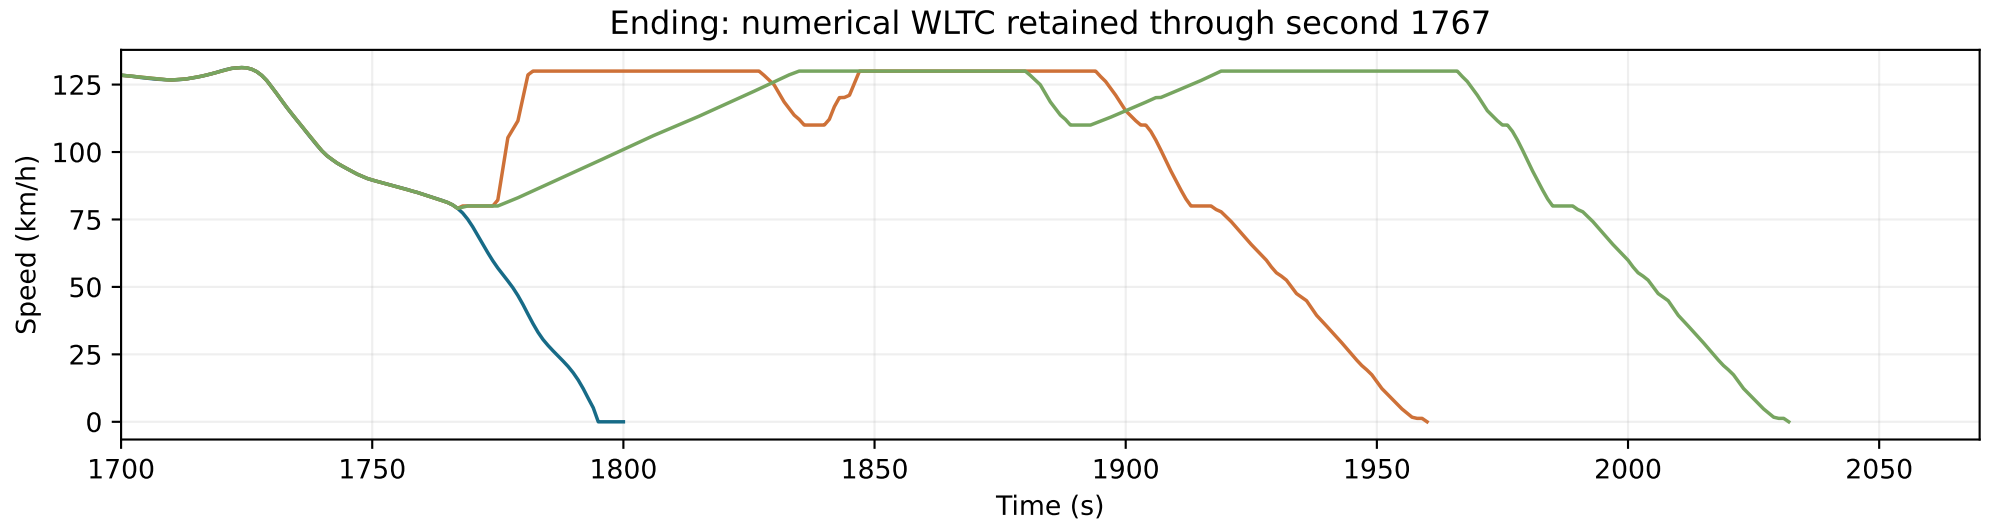

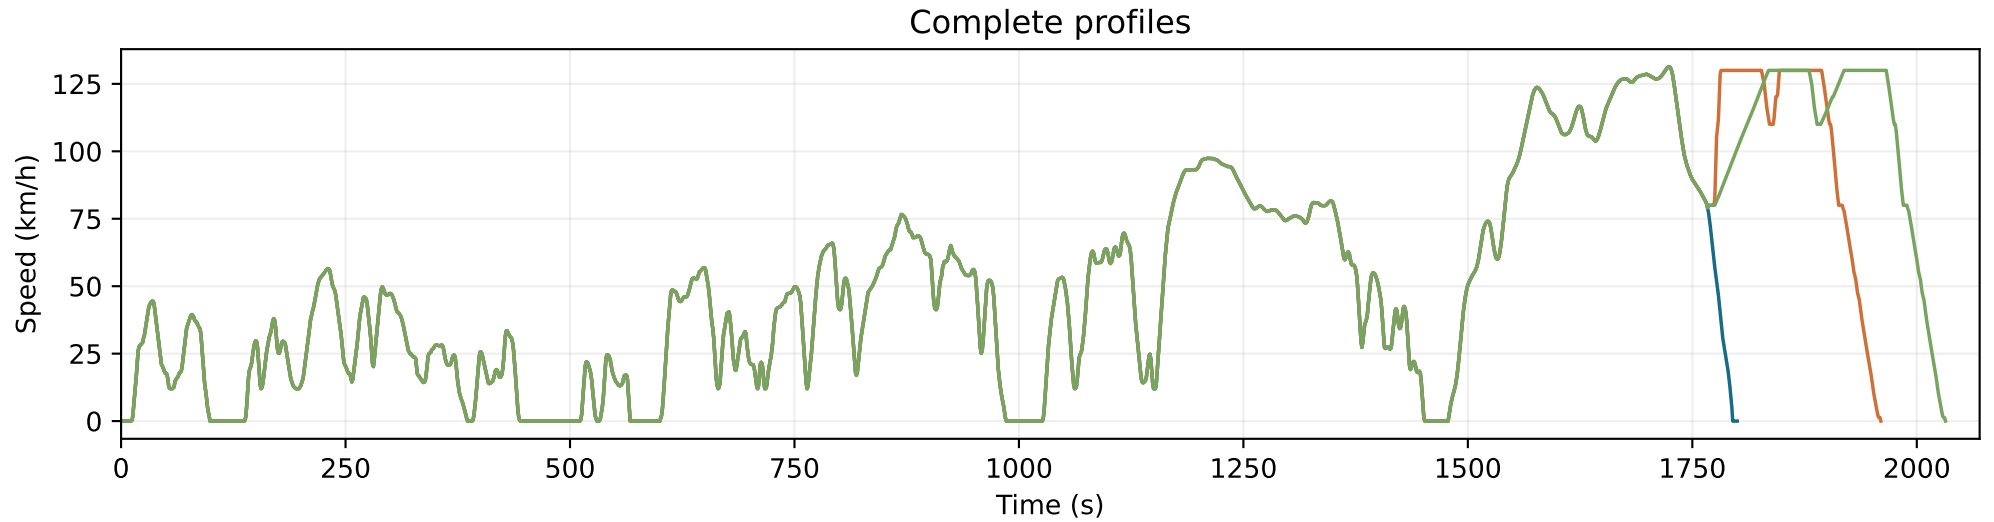

All vehicle parameters held fixed; 2025 technology and charging assumptions.

Reconstructed from ADAC's published figure, not an official numerical or measured speed trace.

Nominal graph accelerations exceed rated power briefly; slower probe retimes the ending to 0.25 m/s².

Neither reconstruction matches measured HVAC, road load, temperature or SOC trajectories.

ADAC electric-cycle reconstruction · source figure 3, April 2021 protocol

— Numerical WLTC — Reconstructed ADAC ending — Slower acceleration probe
